Where are the good yard sales?

Jim Parkin
Chatham School District grades 7-12, EDGE Program, June 16, 2006

Methods
Five surveys representing a spectrum of age groups and both sexes were asked to evaluate 20 yard sales based on:
- cost of home
- quantity of infant, male, female, and adolescent goods
- amount of money spent
- overall quality of the yard sale.

A corresponding GPS waypoint was taken at each yard sale. The data was input to GIS software and queried to see if relationships could be found that would indicate the secrets of finding the better yard sales.

Results
This map reflects a query about which yard sales were of interest based on the researchers' data.

Conclusions
Looking back I guess the project question should have been what can I buy at yard sales for $86.00.

Acknowledgments
I would like to thank the facilitators of the class, the teachers of the class, and the teachers of the class for the support given to the project. I would also like to thank the students of the class for their help. I would also like to thank the teachers of the class for their help. I would also like to thank the teachers of the class for their help. I would also like to thank the teachers of the class for their help.
